

**Amendments to Claims**

This listing of claims will replace all prior versions and listings of claims in the application.

1. (currently amended) A container for use with a brewer to contain a beverage brewing substance and being removably couplable to the brewer during a brewing cycle, the container comprising:

a body portion defining at least a portion of a cavity therein;

at least a portion of the body being ~~water-~~ liquid permeable to allow brewed beverage to flow therethrough;

a cover cooperatively engageable in the cavity of the body portion of the container for enclosing beverage brewing substance in the cavity; and

at least a portion of the cover having a permeable portion to allows liquid to be dispensed from a brewer to which the container is attached through the permeable portion of the cover, through the beverage brewing substance, and out through the permeable portion of the body.

2. (currently amended) The container as in claim 1, wherein the ~~water-~~ liquid permeable portion of the cover is a foraminous material.

3. (original) The container as in claim 2, wherein the foraminous material is a woven material.

4. (original) The container as in claim 2, wherein the foraminous material is a non-woven material.

5. (currently amended) The container as in claim 1, wherein the container includes a removable, liquid permeable base positioned in the cavity ~~and a cover positionable for overlying the cavity~~, a quantity of brewing substance being retainable between the cover and the base for brewing a beverage.

6. (canceled)

7. (currently amended) A cover for use with a brewing substance holder defining a cavity, the cover ~~comprising~~ comprising: a locating portion for positioning the cover ~~[[on]]~~ in engagement at least partially inside the cavity of a ~~[[the]]~~ brewing substance holder with which the cover is engaged, ~~the cover at least partially overlying the cavity~~, a brewing substance space being defined between the substance holder cavity and the cover when engaged in the cavity for retaining a quantity of brewing substance, at least a portion of the cover being ~~water-~~ liquid permeable for passing ~~water-~~ liquid therethrough, ~~water liquid~~ liquid flowing through the water permeable portion and into a brewing substance retained in the brewing substance space producing a brewed beverage.

8. (currently amended) The cover as in claim 7, wherein the ~~water-~~ liquid permeable portion of the cover is a foraminous material.

9. (original) The cover as in claim 8, wherein the foraminous material is a woven material.

10. (original) The cover as in claim 8, wherein the foraminous material is a non-woven material.

11. (currently amended) A brewing substance holder for use with a heated water brewing apparatus to contain a beverage brewing substance and being removably couplable to the brewing apparatus during a brewing cycle; the holder comprising:

a wall defining a cavity in the holder;

a drain passage communicating with the cavity and external of the holder;

a base positioned in the cavity ~~generally~~ removably retained overlying at least a portion of the drain passage, at least a portion of the base being liquid permeable to allow brewed beverage to flow therethrough and out through the drain passage;

a cover ~~overlying~~ cooperatively engageable in at least a portion of the cavity for enclosing beverage brewing substance in the cavity; and

wherein the holder, base and cover define a container for retaining a quantity of brewing substance, at least a portion of the cover being liquid permeable for passing water liquid from the ~~brewer~~ brewing apparatus ~~[[to]]~~ through the cover to the cavity for infusing a brewing substance retained in the cavity, ~~at least a portion of the base being liquid permeable for passing liquid from the cavity to the drain.~~

12. (original) The brewing substance holder as in claim 11, wherein the liquid permeable portion is a foraminous material.

13. (original) The brewing substance holder as in claim 12, wherein the foraminous material is a woven material.

14. (original) The brewing substance holder as in claim 12, wherein the foraminous material is a non-woven material.

15. (new) The container of claim 1, further comprising a handle attached to the cover for gripping the cover when placing the cover into engagement in the cavity of the body.

16. (new) the container of claim 15, further comprising the cover including a recess in at least a portion of a perimeter area, a handle pivotable attached to the cover, the handle being sized and dimension for pivoting relative to the cover and being received in the recess.
